

# CBR Survey Report

## Creating the Survey

To design the survey, I created [a list of questions](#) that are connected to CBR and shared them with my group members. After reviewing the questions, I selected the most relevant ones to include in the final survey.

## Survey Platform

For this project, I chose to use Tally.so as the platform for our survey. Tally.so was ideal because it allows for the incorporation of advanced logic, making it easy to create a survey with complex conditional flows.

## Results and Analysis

The survey received [27 responses](#). The majority of respondents were between the ages of 19 and 22, which aligns well with our primary target audience.

Key Findings:

- Many respondents suggested that the CBR should offer more opportunities to take practice exams.
- Respondents who invested more in driving lessons tended to pass their exams more quickly.

While these things are more focussed on areas of improvement, they also indicate challenges that are beyond our reach.

For example, taking more practice exams or lowering costs, this falls beyond our reach of improvement.

## Conclusion

Although some things cannot be addressed by us, we found an opportunity to help our target audience by creating online resources and assistance. This way can help make the gap smaller and give guidance to individuals preparing for their driving exams.
