

## Choosing My Colours

Next, I chose colours for my website. Picking the right colours is important because they can make people feel different things when they look at my work. Here's what I picked and why: Based on my personal preference i started creating a colour scheme:

<b>DarkBlue #222831</b>	I chose this colour because it provides a good base, I can use it as a text colour or for small elements and for the background. Because of the slight blue tint, it feels very modern.
<b>Beige #EED9C4</b>	The soft beige colour compliments the darker text, and it can be used for background sections.  It adds a cosy vibe to my portfolio.
<b>Red #F05454</b>	I want to use a red colour since i love red or tints of red. It really stands out, warns the user of something. I will use this for the background of my portfolio with the beige as text to give it a warm/cosy vibe.
<b>Blue #22AED1</b>	This colour makes my whole site look fresher, I can give certain elements highlights and make them stand out. Such as icons, titles and links.
