

# Video creation process

## Creating the idea

For the video we came up with the idea of doing it in space since our core values are very adventures and our name , Solaria, is very connected to space. We also have a slogan , Find you spark, that will give some additional space feeling.

The idea wasn't very thought out and we needed a background for the video so I went into the unreal engine software and made a 3d spaceship scene.

## Creating the UE scene

For creating the unreal scene i first created a file and tried it my self but, this wasn't going well and we didn't have much time left at this point so i downloaded a space ship online and configured this to our needs.

Here you see an image of the UE scene, and I am very happy with the scene at this point. This scene will be shot in the videolab at Fontys R10 building.

## Shooting the Video

For the shooting of the video I asked josh if he had time to help us create the video in the video lab. This was no problem.

When we got to the video lab we had some text prepared to say and put this up on a monitor. Then we got some tips from Josh on how to speak and where to stand.

Then we started shooting the video. Here you see some pictures of me standing in the middle creating a beautiful video.

## Final product

After the shooting was done I made some transitions of all the video's and made the final video. You can find this final version on my website. Or right [HERE](#).
