Hello, I'm Jasper Latour

I am 20 Years old and live in Helmond the Netherlands. I still live at home with my parents, brother and sister.

I'm currently studying software development at Fontys University in Eindhoven. My studies mainly focus on developing software with hardware in mind, such as programming Arduino, Raspberry Pi, and other development boards.

In my free time, I enjoy 3D printing useful objects as well as undertaking projects. Additionally, I am a group leader for kids between the ages of 10 and 14 in Scouting. This involves activities every Friday evening and around four weekends per year.

2 Player Pinball-Machine

I am currently working on a 2 player pinball machine. The machine is designed to be played by two players at the same time. The machine is controlled by an Arduino and uses a Raspberry Pi to display the score.

LED Smart-Clock

I have built a smart clock that can display the time, date, and temperature. The clock is controlled by an Arduino and uses a real-time clock module to keep track of the time. The clock is also equipped with an alarm function.

Midi Volume Sliders

I have built a set of MIDI volume sliders that can be used to control the volume of a digital audio workstation. The sliders are controlled by an Arduino and use a MIDI interface to communicate with the computer.
